Introduction to Programming

Week 5

Tony Jenkins

a.m.jenkins@leedsbeckett.ac.uk

OBJECTIVE

Today we are about half-way in the module, so it is a good time to take stock.

Reminders

Your Work

You have one three-hour practical for this module on your timetable.

You should be spending at least the same amount of time on your own, working on the exercise and practical sheets.

Attending the lecture in real-time is optional. Viewing it at some point is not.

Reminders

Lectures

The lecture recordings are posted to Panopto and YouTube on Mondays.

Both are linked from MyBeckett.

Those who attend can also access recordings on Microsoft Stream, which include a transcript.

The lecture on 27/10 will include topics that are not in any of the exercises on MyBeckett.

TEST DEBRIEF

Let's work through the whole process of completing the test!

Tasks

Exercises and Practicals

Make sure you have completed the exercises and practicals up to at least section 3.

Get together the programs you have.

Then create the repo for your final portfolio (URL will be on MyBeckett - watch for the announcement), and arrange your programs before an initial "push".

Deadline: 9am Monday 30th.

NEXT

Next we will look at ways to make sure that our code is DRY.

Thank you
